

Water Policy 18/12/2020

For CCEP Chaudfontaine the protection and sustainability of its water sources is a top priority.

To ensure this, we have implemented a water stewardship program in line with the Alliance for Water Stewardship standard and part of our sustainability action plan THIS IS FORWARD.

The program is based on a risk assessment covering all water sources that we use and aims to secure water availability for all actual and future bottling activities in Chaudfontaine taking into account all possible stakeholders in the same watershed. Any other potential water sustainability programs in the catchment area will be taken into account.

As part of the risk assessment we have identified all stakeholders and their water needs. These insights allow us to communicate and cooperate with each stakeholder in a transparent and focused way.

The stewardship program aims to go beyond legal compliance with focus on continuous improvement. We will periodically communicate about the achieved results.

To ensure success of the program, Chaudfontaine is committed to allocate the necessary resources to this water stewardship program.
